

INSIGHT Portable Flow & Pressure Testers

The FTA500 Portable Flow and Pressure Tester has the same capabilities as the FTA400 Portable FlowTester (except the totalizer function) with the added feature that it will measure static pressure. The tester is designed around a modified FRC INSIGHT digital flowmeter with push button to read pressure. It has a paddlewheel type flow sensor and pressure sensor mounted in the flow tube.

An optional pitot pressure pick-up can be included with the flow tube to allow the Flow and Pressure Tester to read higher flow rates.
